SOFTWARE ENGINEER

Software Engineer skilled in troubleshooting and debugging Ruby, Rails, NodeJS, Javascript, and React. Passionate about learning new things and staying current with new technologies. With an educational background in finance, I have strong mathematical skills which I bring to tackle coding challenges.

TECHNICAL SKILLS

Javascript, React, Ruby, Rails, NodeJS, SQL, PostgreSQL, HTML, CSS, Heroku, Git

TECHNICAL PROJECTS

E-commerce - [Github](#) | [Demo](#)

E-commerce site to buy and sell prayer beads (mala).

- Created a custom database with validation and authentication for restriction and security using Ruby.
- Came up with the logics and functionality needed for buying, selling, and rendering more info.
- Set up the backend association models to give inheritances to classes and controllers to connect with the frontend.
- Using OOP to access the class inheritance in order to render the subclass.

CatTap - [Github](#) | [Demo](#)

An interactive game that requires the users to click on moving images to score points.

- Using Figma to increase visuality with CSS.
- Fetching data from a Cat collection API and parsing the data to use the image only.
- Came up with logics to randomize the Cat image to show different Cat image
- Utilizing the setTimeout() method and CSS display to make the Cat image appear and disappear randomly on the grid.

FurBook - [Github](#) | [Demo](#)

A social media app for pets to interact and make friends with other pets.

- Set up backend routes and database using Ruby, Sinatra and SQLite
- Implemented authentication, authorization, validation and error handling to prevent security risk.
- Implemented semantic-us-react to design a beautiful website quickly.
- Came up with logic for users to see and only edit their message only.
